

Global Location Number (GLN)

GLN is a global numbering system for identifying legal entities and physical locations. Sample physical locations are warehouse, pickup point and delivery address.

GLN is used largely regarding electronic business operations. For example, as identification in the EPD base, for trade with Vinmonopolet, in different transport solutions, etc.

In electronic trading reports (EDI / XML) GLN is used to identify the different players and their roles. In Norway, GLN is widely used in both retail and public sectors.

GLN is billed with an establishment fee in the year GLN is ordered.
Next, GLN is billed with an annual fee for coming years.

For more information about GLN and subscription prices, see **www.gs1.no/gln**.
For questions, please contact e-mail: medlemsservice@gs1.no.

Sincerely,

GS1 Norway
